

# SHOWER DRAINS

Brodie Shower Drains are designed to suit all new and existing building requirements. Manufactured 100% in Australia to Australian Standards (Watermark Approved) Brodie Shower Drains are ideal for all your drainage requirements.

Designed to provide complete drainage of the base as fall lines are placed in the base of the tray. This eliminates the need to slope the tiles along the length of the drain. The installer is only required to slope the tiles in the uniform direction to the edge of the drain allowing for easier installation. It also reduces pooling of water in the shower area as occurs with centrally located shower grates.

As the Brodie Shower Drain can be placed across the front of the shower area this eliminates the need for steps, hobs and shower frames therefore reducing trip and slip hazards. This also is especially useful in disabled shower areas.

- Manufactured completely from 316 Marine Grade Stainless Steel.
- Watermark Approved
- Available in a standard range of lengths and sizes
- Non Standard sizes available upon request
- Drain holes standard in the centre or end but can be placed in other location if required
- Fully welded so no leaks
- Fall lines placed in the base of the tray to allow for easy drainage

## Standard sizes

| Length (mm) | Width (mm) | Height (mm) |
|-------------|------------|-------------|
| 600         | 80         | 20          |
| 700         | 80         | 20          |
| 800         | 80         | 20          |
| 900         | 80         | 20          |
| 1000        | 80         | 20          |
| 1200        | 80         | 20          |
| 1500        | 80         | 20          |
| 1800        | 80         | 20          |

Other sizes available upon request
